Software-Engineering-
Meta-Research

Ontologies for Controlled
Experiments on SE

Ontology to support
systematic reviews in SE

Conclusion

- Retrieving and transferring Knowledge: essential part of human being
- **But:** the most amount of Knowledge is understandable only for humans
- Ontologies make Knowledge understandable for computers as well, that provides:
 - Supporting humans in Knowledge transferring process
 - Opportunity to analyze and generate new knowledge automatically by machines

Ontology to support
systematic reviews in SE

Conclusion

- Retrieving and transferring Knowledge: essential part of human being
- **But:** the most amount of Knowledge is understandable only for humans
- Ontologies make Knowledge understandable for computers as well, that provides:
 - Supporting humans in Knowledge transferring process
 - Opportunity to analyze and generate new knowledge automatically by machines
- Useful for Software Engineering
 - Encapsulate the results of thousands Software Engineering experiments
 - Make possible to analyze them and find out the best Software Engineering practice

Ontologies for Controlled Experiments on SE

Ontology to support systematic reviews in SE

Conclusion

Def. Ontology in Computer Science

- “an explicit specification of a conceptualization” [Gruber 1993]
- Conceptualization: abstract model of some knowledge domain
- Explicit specification: classes, concepts, terms

Motivation

Foundations

Ontologies in Computer
Science

Meta-Research

Ontologies in
Software-Engineering-
Meta-Research

Ontologies for Controlled
Experiments on SE

Ontology to support
systematic reviews in SE

Conclusion

Well-known examples

- ER-Diagrams and UML-Diagrams
- Good for understanding and representing of Knowledge, but still made for humans

Ontology languages

Motivation

Conclusion

Areas of Meta-Research [Ioannidis et al. 2015]

- 1 **Methods:** practices for performing research (e.g. study design, methods, statistics).
- 2 **Reporting:** publications of standards and study registrations (e.g. study registration, information to patients, public and policy-makers)
- 3 **Reproducibility:** methods for verifying research (e.g. sharing data and methods, replicability)
- 4 **Evaluation:** improvements for scientific quality (e.g. pre- and post-publication peer reviews, research funding criteria).
- 5 **Incentives:** rewards and penalties for research (e.g. promotion criteria, penalties in research evaluation).

Meta-Research

Ontologies for Controlled
Experiments on SE

Ontology to support
systematic reviews in SE

Conclusion

Suggested Ontology features

- Based on SR protocol template
- Level-structured
- Both taxonomic *is_a* and meronymic *has* relations
- Level 0: *Experimental Method*, *Primary Research* and *Research Synthesis*
- Next: only *Primary Research*
- But: similar for *Experimental Method* and *Research Synthesis*

Meta-Research

Ontologies for Controlled
Experiments on SE

Ontology to support
systematic reviews in SE

Conclusion

Similarities

- Adoption of ontologies: best for accumulate knowledge and formalize it
- Not a silver bullet: **but**, still enough for fulfilling a lot of objectives
- In Development: towards a comprehensive ontologies for all purposes

Comparison

Meta-Research

Ontologies for Controlled
Experiments on SE

Ontology to support
systematic reviews in SE

Conclusion

Similarities

- Adoption of ontologies: best for accumulate knowledge and formalize it
- Not a silver bullet: **but**, still enough for fulfilling a lot of objectives
- In Development: towards a comprehensive ontologies for all purposes

Differences

- Ontology for supporting systematic reviews [Almeida Biolchini et al. 2007] belongs to Methods
- Ontology for Controlled Experiments [Garcia et al. 2008] belongs to Reproducibility
- Used different ontology languages → barriers for applying them and making as standard
